Ozersk,2015

In the Texas Because of an improbable heat and drought farmers incur terrible losses, river dry up. In Texas, the lake was paint in red color because of what people think about a doomsday. The become heat dried up fields and threatens to leave the country without crop. All territory where temperature does not fall below $+40^{\circ}\text{C}$ is declared by a disaster zone. Farmers of Texas incur huge losses, it is necessary to kill cattle.

The end it is not visible to a heat and a drought, and losses are estimated in 3 billion dollars. The police officer of National park of the State of Texas Thomas Bigem goes on the cracked bottom of the artificial lake O.C. Fisher to San Angelo on August 3, 2011. In this region some weeks, there is a terrifying heat. And in almost dried up lake in Texas thousands of fishes already died out.

Scientists calm the panicking Texans and declare that coloring of water is connected not with a doomsday, and with action of bacteria, which actively appear in the lake in which there is no oxygen. However that, what happened to the lake in San Angelo — not the single phenomenon.

In 2010, there were "dead" and red falls in a number of the countries. Besides, thanks to a terrible drought the large splinter of the shuttle Columbia that was wrecked eight years ago was found in the shoaled lake Nacogdoches in Texas.

THANKS FOR YOU ATTENTION !
